# GOURAV R

**BACKEND DEVELOPER (DJANGO | PYTHON | SQL)**

Bengaluru, Karnataka | +91 9916259010 | gkprof1107@gmail.com

GitHub | LinkedIn | Portfolio | LeetCode

## SUMMARY

Backend Developer and Applied AI Developer who has worked as a freelancer since Jan 2024 and continues to do so, building Django and FastAPI applications with REST APIs, token authentication, and PostgreSQL/SQLite databases. Builds Retrieval-Augmented Generation (RAG) applications using FAISS, Sentence Transformers, and the Gemini API. Skilled in Python, SQL, API development, API integration, relational database design, pytest, and Git/GitHub workflows, with a focus on clean architecture and scalable APIs. Currently learning DSA, Redis, and System Design.

## TECHNICAL SKILLS

- **Languages & Frameworks:** Python, Django, Django REST Framework (DRF), FastAPI, Flask, JavaScript, HTML, CSS, Bootstrap
- **APIs & Authentication:** REST API design, RESTful APIs, API integration, CRUD operations, Token Authentication, pagination
- **Databases:** SQL, PostgreSQL, SQLite, SQLAlchemy ORM, Django ORM, Firebase (Auth & Firestore)
- **Generative AI:** Retrieval-Augmented Generation (RAG), LLM-based applications, FAISS vector search, vector embeddings, Sentence Transformers, Gemini API
- **Tools & Practices:** Git, GitHub (version control), pytest, n8n workflow automation, Streamlit
- **Core Concepts:** Backend Development, API Development, Relational Database Design, Authentication, Clean Architecture
- **Problem Solving:** Data Structures & Algorithms (DSA), LeetCode
- **Currently Learning:** DSA, Redis, System Design

## PROJECTS

**Personal Finance RAG Assistant | GitHub** *Python, FAISS, Gemini API, Streamlit*

- Built a Retrieval-Augmented Generation (RAG) assistant that answers personal finance questions using content extracted from PDF documents, with answers grounded only in those documents.
- Designed the pipeline: PDF text extraction and chunking, local embeddings, FAISS similarity search, and Gemini for answer generation. Moved embeddings to run locally to avoid API rate-limit issues on large PDFs.

**Roast-as-a-Service | GitHub** *Python, FastAPI, Flask, SQLAlchemy, SQLite, pytest*

- Built a roast battle web app with a FastAPI REST backend (battle, round, and score endpoints) and a Flask frontend, storing battles, rounds, and scores with SQLAlchemy and SQLite.
- Designed the relational database schema with SQLAlchemy ORM for battles, rounds, and scores.
- Wrote automated pytest tests covering backend endpoints, battle logic, and database models.

**Todo REST API | GitHub** *Django REST Framework, Token Authentication*

- Built a RESTful Todo API with Django REST Framework and complete CRUD operations.
- Implemented token-based authentication and pagination for secure, manageable API responses.

**Blog App | GitHub** *Django, SQLite, Bootstrap, Authentication*

- Developed a full-featured blogging platform with post creation/editing, user authentication, and a commenting system.
- Structured using a production-ready Django project layout (models, views, templates, URL routing).

## EDUCATION

**Bachelor of Computer Applications (BCA)** *Aug 2023 – Jun 2026*

Sri Maata Degree College, Hospet, affiliated to Vijayanagara Sri Krishnadevaraya University, Bellary | CGPA: 9.2 / 10 | Class: Outstanding

## AWARDS & ACTIVITIES

- Winner – Chakravyuha Event, BITM University, Bellary (July 20, 2024)
- Mentor – Ignitron 2K25 (CodeRush); guided the winning team at a 24-hour national-level hackathon on AI in Healthcare, GM University (Dec 4, 2025)

## LANGUAGES

English, Hindi, Marathi, Kannada
